Invitation WATER TECHNOLOGY TRAINING CAMP
International Training of Trainers 25th -30th September 2023 in Stuttgart/Germany

Dear WorldSkills Members,
Dear Water Specialists,
Dear WorldSkills community,

Our world is facing the challenges of climate change. Water as one of the world's most important resources, is essential for life. Its intelligent use and sustainable management are crucial for the future of our planet.

We encourage you to embrace water technology and take an active part in solving these challenges. There are a variety of ways you can get involved, whether it's by entering competitions like WorldSkills, collaborating with experts and enthusiasts in our community, or supporting initiatives and projects dedicated to the intelligent use of water resources.

With Skill #55 Water Technology, we are doing fundamental work to anchor this topic sustainably in our society. We ensure that young professionals acquire and develop the relevant skills that are essential in the Water Technology sector. At the WorldSkills Competitions we give the global public access to the skills and professions involved.

The next WorldSkills will take place in Lyon in 2024. Already this year we will offer an international training camp. With that we want to inspire you, your colleagues, and young professionals in your industry for the skill Water Technology. We also want to show how important and helpful our work is in this field.

Follow our activities, become part of our competition community and help to support the topic of water in the world from another angle.

Enclosed you will find more information. If you have any questions please do not hesitate to contact us.
